Australis POOL COVERS

Stationary Pool Roller

Pool Cover Rollers are not essential, however, using your Pool Cover is significantly easier with the aid of a pool cover roller. We find that any pool over approximately 6m x 3m will probably benefit from the purchase of a pool cover roller. It takes just 30 seconds to roll the pool cover off or back onto the pool water.

The Manual handling of a pool cover will subject the material to scraping across the pool surrounds and coping tiles, you also get very wet when you do it. Then there is the weight, a 500 micron pool cover is approximately 466 grams per square metre in weight and a 600 micron pool cover is approximately 548 grams per square meter – when dry!! So the pool cover can start to weigh a little as the pools start to get larger in size. We do sell "Pool Cover Only" to customers, but we tend to find that most of our clients who have tried to use a pool cover without a pool cover roller very quickly realise the advantages it offers.

Specifications

- 10 year warranty
- U Shaped power-coated aluminiun frame with stabilised feet.
- Pool Cover Roller leg is 50mm (w) x 30mm (h) x 550mm (l). 325mm from ground to centre of axle. 510mm to top of handwheel
